

ABSTRACT

There are provided a method of cooperation service with attraction and seeing and listening of contents, a contents receiver and an attraction system, which have the effect for inducing a visitor to an attraction to see and listen to contents. A park image which includes an image of a customer who visits an attraction park is taken by a camera of an attraction system, so that the park image is recorded onto a portable recording medium. A receiver receives contents related to the attraction delivered from a broadcaster and reads the park image recorded onto the recording medium which is then inserted into the contents.
